## Three Stage All Mains Receiver Type E B 100

**With Built-in Four-Pole Loudspeaker**  
**Available for use with 200-240 or 100-130 volts A.C.**

This new set is a complete three-stage receiving unit of very high efficiency. It comprises the whole receiving outfit, with complete mains connections and rectifier, also a powerful four-pole loud-speaker of great purity of tone.

It is extremely simple in operation, handsome and attractive in appearance.

This set fulfils the wishes and needs of a wide range of users, and cannot be surpassed in price or efficiency.

Batteries are not required for operating the set. It is simply connected to a socket of the electric mains (wall plug or lamp holder) just like any other electrical apparatus or fitting.

This mains receiver is equipped with our new metal coated valve type 3 NFW, which gives perfect reproduction of signals from the larger European stations. Owners of this set are not confined to listening in to the regional stations only.

The metal coated valve, type 3 NFW, amplifies the total volume range most effectively. It works with two indirectly heated initial stages, and therefore affords an extraordinarily high degree of amplification, much higher than is usual with three valve sets. The set also possesses a very powerful final stage.

Easy operation, precise tuning, inside coils covering wavelengths from 200 to 2000 metres, reaction, adjustable aerial coupling, four different aerial tapplings, connection for pick-up, volume control, and provision for connecting further loud-speakers, are amongst the principal characteristics of this set.

The speaker incorporated gives perfect reproduction of speech and music from the highest notes to the lowest. The volume is sufficient even for audition in rooms of a considerable size.

The whole of the components of this all-mains receiver are incorporated in a handsome wooden cabinet, the front panel being walnut with pleated silk centre. The principal control knobs and the window provided for reading the scale are arranged on the front panel, while all the other connections are attached to a plate in the left side panel.

Assure yourself of the advantages presented by this receiver. Call upon your local dealer and get a convincing demonstration of the striking results.

Type E.B. 100. Codeword: YASON.

## Three Stage ALL-MAINS RECEIVER For Alternating Current R 645 W

**Receiver R 645 W**  
**Price £9-12-6**

Complete with Valves ready  
for connecting to wall plug or  
lamp holder.

**Loudspeaker EB 85**  
**Price £2-2-0**

A selective receiver with high performance. For wave lengths from 200 to 2000 m. Variable aerial couplings, slow motion condenser, reaction. Pure and full-tone reception, especially when used with our Four-Pole Loudspeaker E.B.85.

## Three Stage All Mains Receiver Type R 645 W

**Available for use with 200-240 or  
100-130 volts A.C.**

The excellent reception which our All-Mains Receiver with built-in loud-speaker, EB 100, found with both trade and public, induces us to bring out a new set giving equally good results. We now have pleasure in introducing this set as R 645 W.

It is extremely simple in operation.

The outward appearance is dignified and attractive. Unapproachable in efficiency and price, it suffices the wishes and needs of a wide range of users.

No batteries whatever are needed for this set. It is simply connected to the socket of the electric mains (wall-plug or lamp holder), just as any other electrical apparatus or fitting.

The set is fitted with our efficient metal-coated triple valve 3 NFW. It is possible to receive the larger European stations perfectly on a loud-speaker. Owners of this set are not confined to listening in to the regional stations only.

Easy manipulation, slow-motion condenser with window scale, built-in coils for wave lengths from 200 to 2000 metres, reaction, four different aerial tapplings, connection for pick-up, volume control, are the important features of this set.

The chief controls and the scale window are on the front panel, all other connections being placed at the side.

Connected to a good loud-speaker, this set gives reception which must satisfy even the most fastidious listener. We particularly recommend our Four-pole Loud-speaker EB 85, which has attracted a large following on account of its clear and full-toned reproduction of music and speech. Both models are cased in Walnut, thus rendering a harmonious appearance.

Assure yourself of the advantages of this set. Visit your local dealer and get a convincing demonstration of the striking results.

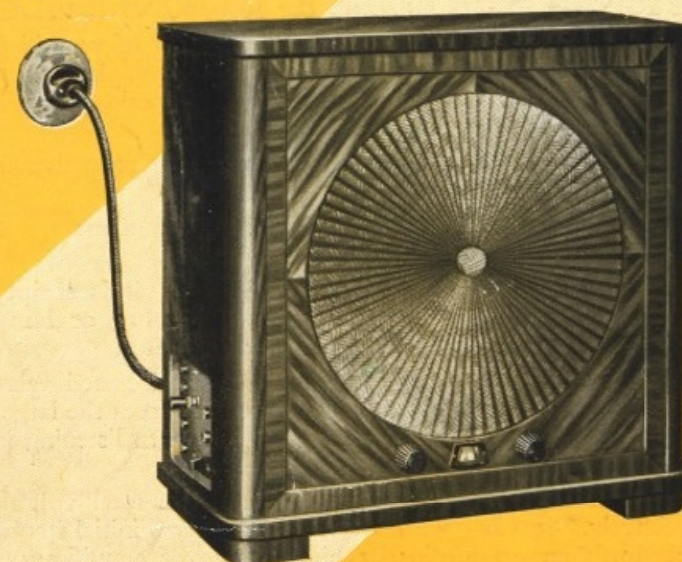

Type R. 645 W. Codeword: YAVUR.

## ALL ELECTRIC 3 stage multiple valve loudspeaker-receiver
